

APPLE ROOTSTOCK CHART

APPLE ROOTSTOCK CHART

M9	Dwarfing influence; induces early cropping; resistant to collar rot; produces larger fruit; requires tree support; ripens early; susceptible to mildew and woolly aphid.
M26 & M26 VF	More vigour; provides better anchorage than M9; moderately susceptible to collar rot; support recommended; most sought after root stock in Australia.
MM102	Resistant to woolly aphid; moderately susceptible to collar rot; good root anchorage.
MM106	Resistant to woolly aphid; susceptible to collar rot; good root anchorage; productive rootstock giving good fruit size.
MM111	Resistant to woolly aphid; moderately resistant to collar rot; good anchorage; no support required; suitable for poorer soils or replanting.
